AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76242

Appln. No.: 10/603,078

**AMENDMENTS TO THE CLAIMS** 

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (original): A transmission apparatus using a plastic fiber, comprising:

i) a plastic fiber, and

ii) a photodetector for detecting light, which has been propagated through the plastic

fiber,

wherein the photodetector comprises a plurality of semiconductor light receiving devices,

whose light receiving sensitivity wavelength regions are identical with one another, each of the

semiconductor light receiving devices having a light receiving area smaller than a cross-sectional

area of a core of the plastic fiber.

2. (original): An apparatus as defined in claim 1 wherein a total sum of the light

receiving areas of the plurality of the semiconductor light receiving devices is approximately

equal to a cross-sectional area of the plastic fiber, and

the plurality of the semiconductor light receiving devices are located such that the

plurality of the semiconductor light receiving devices directly receive the light, which is radiated

out from the plastic fiber, without an optical system intervening between the plastic fiber and the

semiconductor light receiving devices.

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76242

Appln. No.: 10/603,078

3. (original): An apparatus as defined in claim 1 wherein the plurality of the semiconductor light receiving devices have a response band of at least 1 GHz.

- 4. (original): An apparatus as defined in claim 2 wherein the plurality of the semiconductor light receiving devices have a response band of at least 1 GHz.
- 5. (original): An apparatus as defined in claim 1 wherein the plurality of the semiconductor light receiving devices are formed on a single same base plate.
- 6. (original): An apparatus as defined in claim 2 wherein the plurality of the semiconductor light receiving devices are formed on a single same base plate.
- 7. (original): An apparatus as defined in claim 1 wherein each of the plurality of the semiconductor light receiving devices is connected to one of a plurality of independent amplifiers.
- 8. (original): An apparatus as defined in claim 2 wherein each of the plurality of the semiconductor light receiving devices is connected to one of a plurality of independent amplifiers.
- 9. (original): An apparatus as defined in claim 1 wherein the plurality of the semiconductor light receiving devices are formed on a single common base plate and are electrically isolated from one another.

Attorney Docket No.: Q76242

AMENDMENT UNDER 37 C.F.R. § 1.111

Appln. No.: 10/603,078

10. (original): An apparatus as defined in claim 1 wherein the base plate has a rectangular shape and is divided into four subregions, which are arrayed in two columns and in two rows, and

each of the semiconductor light receiving devices is formed on one of the four subregions of the base plate.

- 11. (original): An apparatus as defined in claim 10 wherein each of the semiconductor light receiving devices is formed on one of the four subregions of the base plate, such that a light receiving section of the semiconductor light receiving device is located at a position shifted from a center point of the subregion toward a center point of the entire base plate.
- 12. (original): An apparatus as defined in claim 1 wherein the plurality of the semiconductor light receiving devices are formed on a plurality of independent base plates.
- 13. (original): An apparatus as defined in claim 12 wherein each of the base plates has a rectangular shape, and the base plates are constituted of four base plates, which are arrayed in two columns and in two rows.
- 14. (original): An apparatus as defined in claim 13 wherein each of the semiconductor light receiving devices is formed on one of the four base plates, such that a light receiving section of the semiconductor light receiving device is located at a position shifted from a center point of the base plate toward a center point of the array of the four base plates.
- 15. (original): An apparatus as defined in claim 1 wherein the plastic fiber is a graded index type of fiber.

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76242

Appln. No.: 10/603,078

16. (original): An apparatus as defined in claim 2 wherein the plastic fiber is a graded index type of fiber.

- 17. (new): The transmission apparatus using a plastic fiber according to claim 1, wherein a core diameter of the plastic fiber is at least  $500\mu m$ .
- 18. (new): The transmission apparatus using a plastic fiber according to claim 1, wherein each of the plurality of light receiving devices comprises a photodiode.
- 19. (new): The transmission apparatus using a plastic fiber according to claim 1, wherein each of the light receiving areas of the plurality of semiconductor light receiving devices are assymetrical.
